PROFESSIONAL SUMMARY

Hi, I'm Umair Iqbal, a Flutter developer based in Karachi with four years of experience turning ideas into apps people actually use. Right now I'm the sole mobile developer behind Darent, a vacation-rental marketplace in Saudi Arabia, where I took crash-free sessions from under 70% to over 98%. Before that, at Avialdo Solutions, I helped scale a single Flutter codebase into 400+ branded apps, cut launch times by 70%, and mentored a junior engineer along the way. I care about clean architecture, dependable releases, and building things that hold up in production, not just in a demo.

TECHNICAL SKILLS

- **Mobile Engineering:** Flutter, Dart, Clean Architecture, MVVM, Feature-First Architecture, Offline-First Architecture, Deep Linking (app_links)
- **State Management:** BLoC, GetX, Provider
- **Testing:** Unit Testing, Widget Testing, Test-Driven Development (TDD)
- **Backend & Cloud:** Python, Django REST Framework, AWS (EC2, S3, EFS, Elastic Beanstalk, IAM, ELB), Terraform, Cloudflare Caching
- **Payments & Integrations:** Stripe, PayPal, HyperPay, ApplePay, Tabby, Tamara, MADA, RevenueCat (Subscription)
- **Analytics & Monitoring:** Firebase Analytics, Crashlytics, PostHog, Datadog, MoEngage.
- **Tools & Practices:** Git, GitHub, GitHub Actions, Fastlane, Shorebird, Postman, Jira, Figma, CI/CD, Code Review, Mentoring

PROFESSIONAL EXPERIENCE

Senior Flutter Developer

Meezotech | Jan 2026 – Present

- Sole mobile developer (iOS and Android) for Darent, a licensed prop-tech startup and digital vacation-rental marketplace connecting travelers and property owners across Saudi Arabia.
- Raised crash-free sessions from below 70% to over 98% (Firebase Crashlytics) by resolving critical architectural and functional issues.
- Replaced the existing HyperPay webview with a custom HyperPay Flutter SDK integration, improving the checkout experience for Visa, Mastercard, Mada Pay, and STC Pay.
- Introduced Tamara as a new buy-now-pay-later option, enabling installment-based payments.
- Restructured the codebase to a feature-first folder architecture, improving maintainability and developer onboarding.
- Reduced application startup overhead by eliminating unnecessary API calls and redundant UI rebuilds.
- Integrated PostHog for session recordings and in-app event tracking to support product and UX decisions.
- Supported growth to 2.15K+ new Google Play users and 14.8K+ App Store downloads through stability and UX improvements.
- Own the complete mobile development lifecycle: feature development, performance optimization, debugging, and release management.

Junior Flutter Engineer → Mid-Level Flutter Engineer

Avialdo Solutions | Oct 2023 – Dec 2025

- Promoted from Junior to Mid-Level Flutter Engineer within 14 months based on technical growth and delivery impact.
- Built and maintained a white-label, flavor-based Flutter application from a single codebase, deployed across 400+ branded apps for labor unions throughout North America.
- Reduced application launch times by approximately 70% by eliminating redundant API polling and resolving critical network bottlenecks, while lowering backend server load and cost.
- Designed and implemented CI/CD pipelines using Fastlane, Dart scripts, and GitHub Actions to publish updates across 400+ apps on Google Play and the Apple App Store.
- Automated approximately 80% of the manual work involved in client onboarding for new application creation.
- Introduced test-driven development at the company, writing unit and widget tests to reach approximately 45% test coverage.
- Mentored a junior Flutter engineer within a 2-person team (split from a larger 5-person team) and frequently led implementation of major platform changes.
- Developed REST APIs using Django REST Framework and took full-stack ownership of features across mobile, backend, and deployment layers.
- Migrated and deployed a Django backend from a standalone EC2 instance to Elastic Beanstalk using Terraform, and containerized it with Docker.
- Monitored crash rates and platform stability with Datadog, contributing to a considerable reduction in support tickets.

Junior Flutter Developer → Flutter Developer

Four-Fox IT Services & Consulting | Jul 2022 – Oct 2023

- Owned the complete development lifecycle for 5+ client projects across the fitness, event-management, branding, and service industries.
- Independently built 3 applications end-to-end, from initial concept and UI/UX design through deployment – including one delivered solo in approximately 3 months.
- Built responsive cross-platform interfaces using GetX architecture, integrating Google Maps, real-time chat systems, and merchant payment gateways.
- Delivered client-owned private builds including Book a Party (event-management platform), Fitness Exchange (fitness/gym platform), and Vacation From Cleaning (US cleaning-services platform).
- Managed multiple high-priority projects simultaneously, improving delivery timelines and team efficiency.

EDUCATION

Bachelor of Computer Science | **University of Karachi (UBIT)**

Graduated 2024
