PROFESSIONAL SUMMARY

Software engineer with 4 years of experience split evenly across three layers of the stack: mobile applications (Flutter/Dart), backend APIs (Python/Django), and cloud infrastructure (AWS/Terraform). I've shipped production Flutter apps to 400+ end clients, built and deployed the Django services behind them, and owned the Terraform-managed AWS infrastructure, IAM, and CI/CD pipelines that kept it all running. Currently the sole mobile developer for Darent, a Saudi Arabia-based vacation-rental marketplace, where I raised crash-free sessions from under 70% to over 98%. I like owning a feature end-to-end – from the UI down to the infrastructure it runs on.

TECHNICAL SKILLS

- **Mobile Engineering:** Flutter, Dart, Clean Architecture, MVVM, Feature-First & Offline-First Architecture, BLoC, GetX, Provider, Deep Linking, Unit/Widget Testing, TDD
- **Backend & APIs:** Python, Django REST Framework, REST API Design, Database Design, Docker, Full-Stack Feature Ownership
- **Cloud & Infrastructure:** AWS (EC2, S3, EFS, IAM, VPC, Security Groups, Elastic Beanstalk, ELB, CloudWatch), Terraform (IaC), Cloudflare Caching, OpenTelemetry
- **CI/CD & DevOps Tooling:** GitHub Actions, Fastlane, Shorebird, Slack-Integrated Pipeline Alerting, Git, GitHub, Datadog, PostHog
- **Payments & Analytics:** Stripe, PayPal, HyperPay, ApplePay, Tabby, Tamara, MADA, RevenueCat, Firebase Analytics & Crashlytics, MoEngage
- **Practices & Tools:** Agile/Scrum, Jira, Figma, Postman, Code Review, Mentoring

PROFESSIONAL EXPERIENCE

Software Engineer

Meezotech | Jan 2026 – Present

- **Mobile:** Sole mobile developer (iOS and Android) for Darent, a licensed prop-tech startup and digital vacation-rental marketplace connecting travelers and property owners across Saudi Arabia, owning the release lifecycle end-to-end.
- **Mobile:** Raised crash-free sessions from below 70% to over 98% (Firebase Crashlytics) by resolving critical architectural and functional issues, and restructured the codebase to a feature-first folder architecture.
- **Mobile:** Replaced the existing HyperPay webview with a custom HyperPay Flutter SDK integration (Visa, Mastercard, Mada Pay, STC Pay) and introduced Tamara as a buy-now-pay-later option.
- **Mobile:** Reduced application startup overhead by eliminating unnecessary API calls and redundant UI rebuilds.
- **Analytics:** Integrated PostHog for session recordings and in-app event tracking to support product and engineering decisions; supported growth to 2.15K+ new Google Play users and 14.8K+ App Store downloads.

Software Engineer → Mid-Level Flutter Engineer

Avialdo Solutions | Oct 2023 – Dec 2025

- Promoted from Junior to Mid-Level Engineer within 14 months based on technical growth and delivery impact; took full-stack ownership of features spanning mobile, backend, and deployment layers for LinkedUnion, a white-label platform deployed across 400+ branded apps.
- **Mobile:** Built and maintained a flavor-based Flutter application from a single codebase, deployed across 400+ branded apps for labor unions throughout North America; reduced application launch times by approximately 70% by eliminating redundant API polling and network bottlenecks.
- **Mobile:** Introduced test-driven development, writing unit and widget tests to reach approximately 45% coverage, and mentored a junior Flutter engineer within a 2-person team.
- **Backend:** Developed REST APIs using Django REST Framework to support mobile app features, and took full-stack ownership of features across mobile, backend, and deployment layers.
- **Backend:** Migrated and deployed a Django backend from a standalone EC2 instance to Elastic Beanstalk using Terraform, and containerized it with Docker.
- **Cloud/DevOps:** Managed IAM policy entirely through Terraform for a 10+ engineer backend team, defining role-based access (Admin, Manager, Engineer, Database Read/Write, Read-only) alongside hands-on work with VPCs, security groups, and secrets management.
- **Cloud/DevOps:** Consolidated multi-region observability (3–5 Elastic Beanstalk environments) onto a single EFS store, reducing redundant OpenTelemetry instances to one and simplifying Datadog alerting.
- **Cloud/DevOps:** Designed and implemented CI/CD pipelines using Fastlane, Dart scripts, and GitHub Actions to publish updates across 400+ apps, automating approximately 80% of manual client-onboarding work, and enhanced Slack integration with inline failure-alert action controls for both mobile and infra pipelines.
- **Cloud/DevOps:** Configured Cloudflare caching for API requests with TTL-based invalidation rules to eliminate stale data while reducing backend load.

Junior Flutter Developer → Flutter Developer

Four-Fox IT Services & Consulting | Jul 2022 – Oct 2023

- **Mobile:** Owned the complete development lifecycle for 5+ client projects across the fitness, event-management, branding, and service industries, independently building 3 applications end-to-end – including one delivered solo in approximately 3 months.
- **Mobile:** Built responsive cross-platform interfaces using GetX architecture, integrating Google Maps, real-time chat systems, and merchant payment gateways.
- **Mobile:** Delivered client-owned private builds including Book a Party (event-management platform), Fitness Exchange (fitness/gym platform), and Vacation From Cleaning (US cleaning-services platform).
- **Delivery:** Managed multiple high-priority projects simultaneously, improving delivery timelines and team efficiency.

EDUCATION

Bachelor of Computer Science | University of Karachi (UBIT)

Graduated 2024
